BACKGROUND METHODS RESULTS DISCUSSION QUESTIONS

Background: Pathogens

Ranaviruses Chytrid

BACKGROUND METHODS RESULTS DISCUSSION QUESTIONS

Background: Ranavirus

“Ebola” of Amphibians

- Edema
- Erythema
- Hemorrhages
- Ulcerations

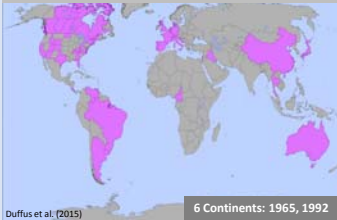

BACKGROUND METHODS RESULTS DISCUSSION QUESTIONS

Background: Ranavirus

18 Families:
Alytidae, Ranidae, Hylidae, Bufonidae, Centrolenidae, Craugastoridae, Dendrobatidae, Discoglossidae, Leptodactylidae, Pipidae, Myrobatrachidae, Rhacophoridae, Scaphiropodidae, Ambystomatidae, Salamandridae, Hynobiidae, Cryptobranchidae

>100 Species

Global Distribution of Ranavirus

Duffus et al. (2015) 6 Continents: 1965, 1992

All Latitudes, All Elevations

BACKGROUND METHODS RESULTS DISCUSSION QUESTIONS

Background: Ranavirus Transmission

Indirect

Water or Sediment
Skin, Gills, Intestines

Direct Contact

One Second Skin Contact

Ingestion

Incidental, Necrophagy, Cannibalism, Predation

Brunner et al. (2004), Harp & Petranka (2006), Brunner et al. (2007), Hoverman et al. (2010), Robert et al. (2011)

BACKGROUND METHODS RESULTS DISCUSSION QUESTIONS

Cases of Pathogen Pollution

- White-nose syndrome
- Ranavirus through bait salamanders (Jancovich et al 2005)
- Bsal into Europe (Martel et al 2014)
- Bd release through captive breeding program (Walker et al 2008)

BACKGROUND METHODS RESULTS DISCUSSION QUESTIONS

Sampling Process

- Catch individuals
- Hold individuals in container
- Process individuals
- Release individuals

BACKGROUND METHODS RESULTS DISCUSSION QUESTIONS

Research Objectives

1. Determine if cohousing animals in buckets affects ranavirus transmission
2. Determine if changing gloves between animals reduces ranavirus transmission.

BACKGROUND METHODS RESULTS DISCUSSION QUESTIONS

Methods: Study Animal

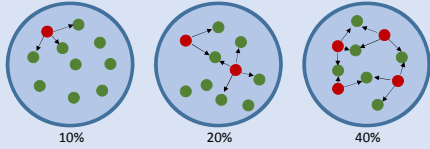

Wood Frog, *Lithobates sylvaticus*

- Highly susceptible to Ranavirus
 - > 90% mortality when exposed in water

BACKGROUND **METHODS** RESULTS DISCUSSION QUESTIONS

Methods: Cohousing

- Different lengths of time (15 min, 30 min, 60 min)
- Densities of infected individuals (10%, 20%, 40%)

10% 20% 40%

3 time periods * 3 densities * 10 individuals → 90 individuals/replicate
90 individuals/replicate * 5 replicates → 450 individuals
10 controls

BACKGROUND **METHODS** RESULTS DISCUSSION QUESTIONS

Methods: Cohousing

Our Experiment Field Example

Clip tails of infected individuals (for identification and pathogen verification)

BACKGROUND **METHODS** RESULTS DISCUSSION QUESTIONS

Methods: Cohousing

Our Experiment Field Example

Cohouse in buckets (for 15, 30, or 60 minutes)

BACKGROUND **METHODS** RESULTS DISCUSSION QUESTIONS

Methods: Cohousing

Our Experiment Field Example

Retrieve from bucket

BACKGROUND **METHODS** RESULTS DISCUSSION QUESTIONS

Methods: Cohousing

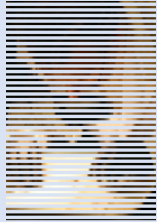

Our Experiment Field Example

Place in individual tubs and monitor for 14 days

BACKGROUND **METHODS** RESULTS DISCUSSION QUESTIONS

Methods: Cohousing

Necropsy all that die (Euthanize all at end)

BACKGROUND **METHODS** RESULTS DISCUSSION QUESTIONS

Methods: Cohousing

Analyze with qPCR

BACKGROUND **METHODS** RESULTS DISCUSSION QUESTIONS

Results: Cohousing

BACKGROUND METHODS **RESULTS** DISCUSSION QUESTIONS

Results: Cohousing

3 of 5 replicates

- 91% of infected died
- 8% of infected survived
- 1.6% mortality with no detected infection

BACKGROUND METHODS **RESULTS** DISCUSSION QUESTIONS

Methods: Glove Change

- Change gloves or don't change gloves
- Vary density of infected individuals

5%
10% ← Glove Change
20%
40% ← Glove Change

No Glove Change

((4 densities no change) + (2 densities change)) * 20 individuals = 120 individuals
120 individuals per replicate x 5 replicates → 600 individuals
10 controls

BACKGROUND METHODS RESULTS DISCUSSION QUESTIONS

Methods: Glove Change

1 person handles ONLY infected individuals

1 person handles ONLY clean individuals

BACKGROUND METHODS RESULTS DISCUSSION QUESTIONS

Methods: Glove Change

Place individual on tray

BACKGROUND METHODS RESULTS DISCUSSION QUESTIONS

Methods: Glove Change

Our Experiment Field Example

Swab individual

BACKGROUND **METHODS** RESULTS DISCUSSION QUESTIONS

Methods: Glove Change

Keep swabs from infected individuals

BACKGROUND **METHODS** RESULTS DISCUSSION QUESTIONS

Methods: Glove Change

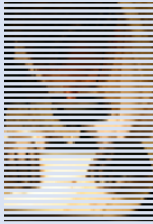

Our Experiment Field Example

Monitor individuals for 14 days

BACKGROUND **METHODS** RESULTS DISCUSSION QUESTIONS

Methods: Glove Change

Necropsy all that die (Euthanize all at end)

BACKGROUND METHODS RESULTS DISCUSSION QUESTIONS

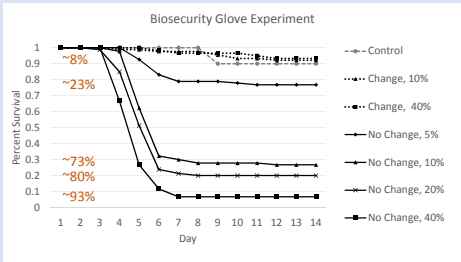

Methods: Glove Change

Analyze with qPCR

BACKGROUND METHODS RESULTS DISCUSSION QUESTIONS

Results: Glove Change

- 85% of infected died
- 15% of infected survived
- 2% mortality with no detected infection

3 of 5 replicates

BACKGROUND METHODS **RESULTS** DISCUSSION QUESTIONS

Discussion

- Cohousing tadpoles resulted in pathogen transmission
 - Even short time periods matter
 - Lower infection prevalence → Lower mortality
 - 10% prevalence → 50% mortality
 - 20% prevalence → 90% mortality
- Gloves can transfer virus
 - Even at low infection prevalence (10% → 70% mortality)

BACKGROUND METHODS RESULTS **DISCUSSION** QUESTIONS

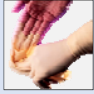

Biosecurity Practices

- House animals individually (i.e. Ziploc bags or tupperware)

BACKGROUND METHODS RESULTS **DISCUSSION** QUESTIONS

Biosecurity Practices

- House animals individually (i.e. Ziploc bags or tupperware)
- Use new gloves for every individual

Lethal Effect of Latex, Nitrile, and Vinyl Gloves on Tadpoles
SCOTT D. CAHREN¹*, ROSE A. ALFORD¹ and LEE F. SKERRATT¹

Guidelines for the Safe Use of Disposable Gloves with Amphibian Larvae in Light of Pathogens and Possible Toxic Effects
AMY L. GREER²
Chief Health Evaluation Scientist
The Research Institute for Child Development, 127 Edward Street
Suite 405, Toronto, ON M5G 1E2, Canada
*email: scott@wslab.com

“We wish to emphasize that discontinuing glove use may unnecessarily lead to increased spread of harmful pathogens.”

BACKGROUND METHODS RESULTS **DISCUSSION** QUESTIONS

Biosecurity Practices

- Clean up!

- Bleach $\geq 4\%$
- EtOH $\geq 70\%$
- Virkon $\geq 1\%$
- Nolvasan $> 0.75\%$

BACKGROUND METHODS RESULTS **DISCUSSION** QUESTIONS

Conclusion

- Cohousing and handling both affect ranavirus transmission
- Researchers have mistakenly furthered disease spread before
- Only YOU can limit disease outbreaks!

BACKGROUND METHODS RESULTS **DISCUSSION** QUESTIONS

Swabbing Example: <https://www.youtube.com/watch?v=a5CtPrGOK8c>

BACKGROUND METHODS RESULTS **DISCUSSION** QUESTIONS

Breakout Session

- Group 1 – Terrestrial salamanders
- Group 2 – Tadpoles
- Group 3 – Adult frogs
- Group 4 – Reptiles
