

### ECOSYSTEM SERVICES PROVIDED BY MOIST-SOIL WETLAND MANAGEMENT

Amy Alford  
10 November 2014

---

---

---

---

---

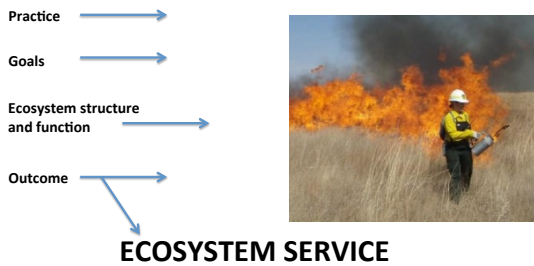

---

---

---

### What is ecosystem management?

“Management driven by explicit *goals*, executed by *practices* and made adaptable by monitoring and research based on our best *understanding of the ecological interactions and processes necessary to sustain ecosystem composition, structure, and function.*” – adapted from ESA

---

---

---

---

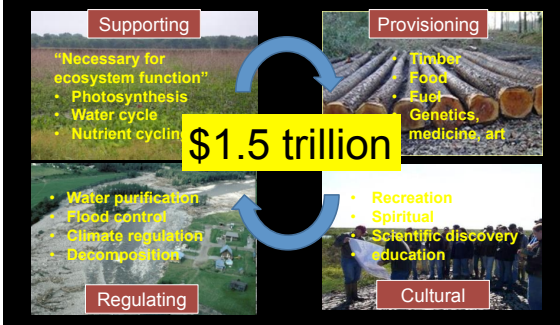

---

---

---

---

“Ecosystem goods and services are benefits human populations derive directly or indirectly from ecosystems” – Costanza et al. 1997

---

---

---

---

---

---

---

---

### CAVEAT

"We abuse land because we regard it as a commodity belonging to us. When we see land as a community to which we belong, we may begin to use it with love and respect".  
- Aldo Leopold

#### HOWEVER

"...the most important contribution of the widespread recognition of ecosystem services is that it **REFRAMES** the relationship between humans and the rest of nature"  
".....is essential to solving the problem of how to build a sustainable and desirable future for humanity."

**"All decisions that involve tradeoffs involve valuation either implicitly or explicitly".....**

-Costanza et al. 2014. *Global Environmental Change*

IT IS ALL ABOUT IDENTIFYING ANY BENEFIT FROM ECOSYSTEMS THAT HUMANS RELY ON AND DEMONSTRATING THIS TO THE GENERAL PUBLIC - **WHY?**

---

---

---

---

---

---

---

---

### Assessing Ecosystem Services

#### Identify

What services have been lost?  
What services can be restored through ecosystem management?

#### Quantify

How is ecosystem management providing a benefit?

#### Valuation

Economics, non-market valuation, social valuation, willingness to pay

---

---

---

---

---

---

---

---

### Mississippi Alluvial Valley

- 10 million ha bottomland forest
- Interspersed emergent wetlands
- Majority of discharge comes from upstream

---

---

---

---

---

---

---

---

**Beneficial Seasonal Flooding**

- Disturbance
- Scouring
- Nutrient cycling and sediment deposition
- Decomposition
- Mixture of mast-producing hardwoods and seed producing annuals
- Diversity of habitat

---

---

---

---

---

---

---

---

**Great Flood of.....  
2011**

- \$4 billion in damages
- River closed to navigation
- Closed refineries
- Possible redirection of MS River

The Great Mississippi River Flood of 1927, photographed in Illinois on March 25.  
"The Floods of 1927 in the Mississippi Basin," Department of Agriculture, 1927, United States Government Printing Office, No. 28

---

---

---

---

---

---

---

---

**3,500 miles of Levees along the Lower Mississippi River**

---

---

---

---

---

---

---

---

Alluvial Soils + Warm, Moist Climate = Perfect for agriculture

Only 16% of the remaining BLHW remains

---

---

---

---

---

---

---

---

Loss of Supporting Services

- Loss of nutrient cycling
  - Increase in N + P in runoff
- Eutrophication
- Dead Zone

Loss of Other Services

- Loss of wildlife habitat
- Flood protection
- Coastal fisheries

---

---

---

---

---

---

---

---

**How do we restore these services?**

Moist-soil wetland management

- Annual vegetation
- Seasonal flooding
- Managed hydrology
  - LMJV 1<sup>st</sup> priority is restoration of hydrology

---

---

---

---

---

---

---

---

---

---

---

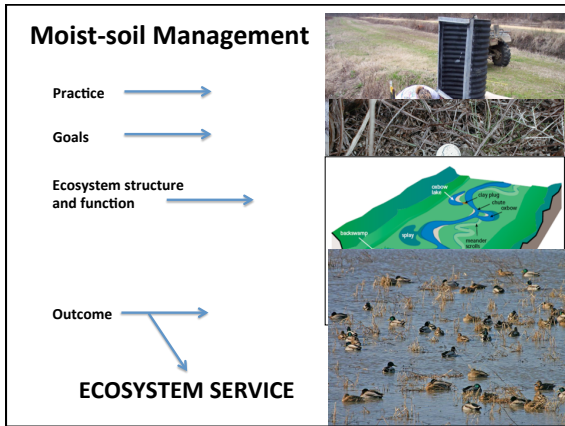

---

---

---

---

---

---

---

---

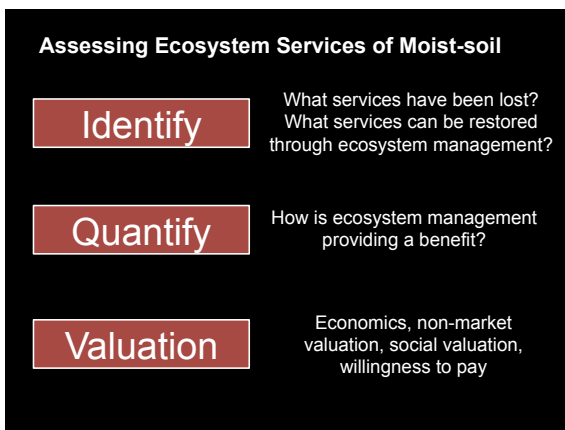

---

---

---

---

---

---

---

---

---

---

---

---

---

We've identified, quantified, and valued services provided by restoration of waterfowl habitat through moist-soil wetland management.

Can you identify any other potential services?

What are some other functions of wetlands?

---

---

---

---

---

---

---

---

---

---

---

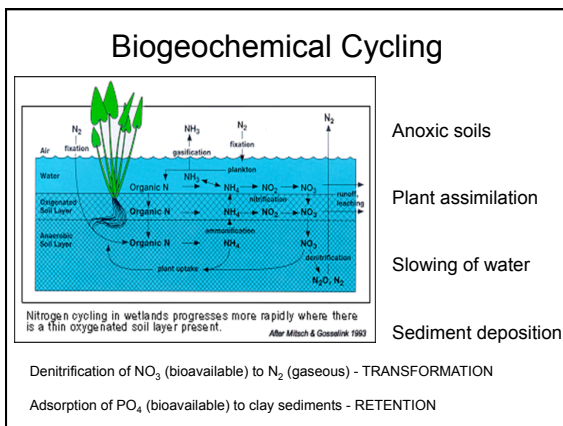

---

---

---

---

---

---

---

---

---

---

---

---

---

**Identify**

Because moist-soil management restores hydrology, it likely restores wetland functions such as habitat for other wetland wildlife and nutrient and sediment retention.

**Quantify**

How much crayfish are available for harvest?  
How do N, P, and sediments in runoff from moist-soil compare to surrounding landscape?

**Valuation**

What is the value of crayfish to landowners?  
What is the value of reducing nutrient pollution?

---

---

---

---

---

---

---

---

### Crayfish Ecology

- Adapted to drying environments
- Omnivorous
- ~300 eggs per female
- Multiple hatching events

---

---

---

---

---

---

---

---

### Commercial Crayfish Production

- 82% of land uses planted forage
- 600 kg/ha yield per farm
- Harvested November-May
- \$135 million (2013)

---

---

---

---

---

---

---

---

**Rice Fields**

- Seasonally flooded
- Annual vegetation
- Wetland soils
- Invertebrates

**Moist-soil wetlands**

- Seasonally flooded
- Annual vegetation
- Wetland soils
- Invertebrates

---

---

---

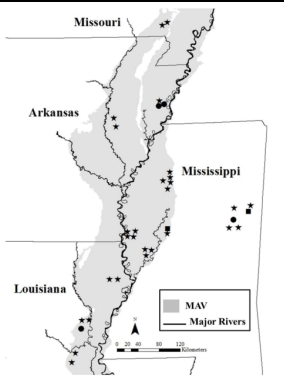

---

---

---

---

---

**34 wetlands**

- 2 in Missouri
- 5 in Arkansas
- 20 in Mississippi
- 7 in Louisiana

**3 years**

- 9 wetlands in 2009
- 15 wetlands in 2010
- 18 wetlands in 2011
- 42 wetland-years

- Weekly trapping
- April-June
- Private and public lands

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### Quantify Crayfish Yield

- Estimate daily yield
  - Field run crayfish regardless of species
  - Mixed model approach
    - Repeated measures with day as repeated effect
  - Latitude and temperature as covariates

$\bar{x} = 2.4 \text{ kg/ha SE} = 0.5$

RSE = 21%

2.1 lbs/acre vs. 8.5 lbs/acre from LA rice fields

---

---

---

---

---

---

---

---

---

---

### Value Crayfish Harvest

Crayfish harvesting in Louisiana

- Planted rice supports crayfish forage
- 45% of farmers plant rice
- 71 day harvest season Nov-May
- Hired labor and equipment costs
- Annual budgets prepared by LSU AgCenter

Crayfish in moist-soil wetlands

- Little equipment or labor costs
- Meets conservation goals for waterfowl
- 45 days March-June
- Yield, costs, and value unknown
- 4 scenarios with varying inputs

---

---

---

---

---

---

---

---

---

---

	Scenario 1	Scenario 2	Scenario 3	Scenario 4
<b>Direct costs</b>				
<i>Self-Propelled Equipment</i>				
Fuel	27.00	27.00	27.00	27.00
Labor	122.20		122.20	
Repair and maintenance	14.08	14.08	14.08	14.08
<i>Non-durable goods</i>				
Crayfish traps	82.50	82.50		
Waders	3.50	3.50	3.50	3.50
Ice chest 48qt	1.14	1.14	1.14	1.14
Sacks	0.68	0.68	0.68	0.68
Manufactured bait	71.28	71.28	71.28	71.28
<i>Interest on operating capital</i>				
	3.17	2.13	2.05	1.01
<b>Total direct costs</b>	<b>325.57</b>	<b>202.33</b>	<b>241.95</b>	<b>118.71</b>
<b>Fixed costs</b>				
Self-Propelled Equipment	45.18	45.18	45.18	45.18
<b>Total specified costs (\$/acre)</b>	<b>370.75</b>	<b>247.51</b>	<b>287.13</b>	<b>163.89</b>
<b>Yield (lb/acre)</b>	96	96	96	96
<b>Breakeven selling price (\$/lb)</b>	<b>3.86</b>	<b>2.57</b>	<b>2.99</b>	<b>1.70</b>

---

---

---

---

---

---

---

---

---

---

## ENTERPRISE COMPARISON

	Rice-Crawfish in Louisiana	Moist-soil 1 <sup>st</sup> year	Moist-soil 2 <sup>nd</sup> year
Yield (lbs/acre)	600	96	96
Production cost \$/acre	\$750	\$248	\$164
Break-even \$/lb	\$1.25	\$2.57	\$1.70

- Retail prices in North Mississippi \$3.15-\$5.00/lb
- Recreational value as well
- Potential to reduce consumption of imported crayfish

---

---

---

---

---

---

---

---

To market any alternatively sourced seafood product, it must be accepted by consumers.

- Single blind test
- 149 participants
- Valued taste similarly

---

---

---

---

---

---

---

---

## Moist-soil wetland water quality

- Hydrological management to promote annual vegetation and provide foraging habitat
- No evaluation of effluent quality

Figure 4.1 Conceptual diagram illustrating the effects of hydrology on wetland function and the biotic feedbacks that affect wetland hydrology. Pathways A and B are feedbacks to the hydrology and physicochemistry of the wetland.

---

---

---

---

---

---

---

---

### Water Sampling

- 4 wetlands
- 4 adjacent ag fields
- December – April
- 2010-2012

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

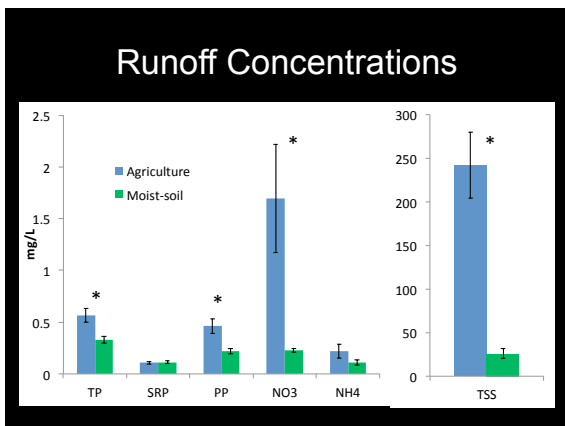

---

---

---

---

---

---

---

---

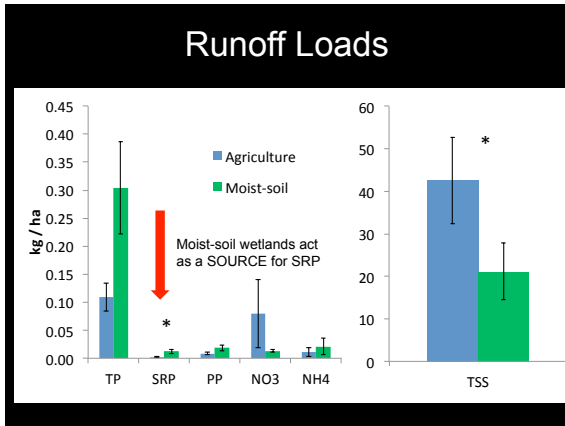

---

---

---

---

---

### How do we value water quality?

Replacement cost

Willingness to pay

Contingent valuation

---

---

---

---

---

---

---

Supporting

Provisioning

Regulating

Cultural

---

---

---

---

---

---

---

### WHAT ARE WETLANDS WORTH TO YOU?

Remember that habitat management is driven by knowledge of ecological processes and structure.

Therefore, many benefits often occur from habitat (ecosystem) management.

Identify, quantify, and value these benefits.

---

---

---

---

---

---

---
