

An approximate answer to the right question is worth a good deal more than the exact answer to an approximate problem

—John W. Tukey (1915–2000)

What makes a scientist great is the care that he/she takes in telling you what is wrong with his/her results, so that you will not misuse them

—W. Edwards Deming (1900-1993)

# Do we really need statistics in science?

Timothy M. Young, Ph.D.  
Department of Forestry,  
Wildlife and Fisheries
