

HABITAT PARTITIONING BY THREE
DARTER SPECIES IN THE CLINCH RIVER
SYSTEM WITH IMPLICATIONS FOR
STREAM RESTORATION EFFORTS

DANIEL WALKER

DARTERS

- Percidae- Etheostomatini¹
 - *Ammocrypta*, *Etheostoma*, *Percina*, *Nothonotus*
 - 90 of the ~320 FW fish species in TN (most in N.AM)

Banded darter, *E. kanawaha*

Gilt darter, *P. evides*

1- Etnier & Starnes, 1993

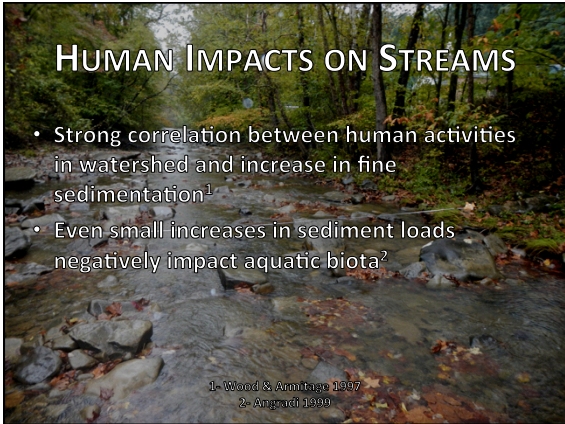

DARTERS

Orangefin darter, *E. spectabile*
Etnier & Starnes 1993

DARTERS

HUMAN IMPACTS ON STREAMS

- Strong correlation between human activities in watershed and increase in fine sedimentation¹
- Even small increases in sediment loads negatively impact aquatic biota²

1- Wood & Armitage 1997
2- Angerudi 1999

STREAM RESTORATION

- Ecological engineering¹
 - Ecosystem restoration
- Restore ecosystem services of the stream or watershed¹
- Remediate 'urban stream syndrome'²

1- Palmer et al. 2013
2- Walsh et al. 2005

STREAM RESTORATION

- Can address biological and geomorphological deficiencies
 - Stream engineering and construction
 - Aquatic faunal relocation

COAL CREEK RESTORATION

- 3rd order stream in Anderson County, TN
- 1st tributary of Clinch River DS of Norris Dam
- Watershed drains area of coal mining activity¹
 - Began 1830
 - Major economic activity in region

1. Brahana et al. 1986

COAL CREEK RESTORATION

Coal Creek Watershed

COAL CREEK RESTORATION

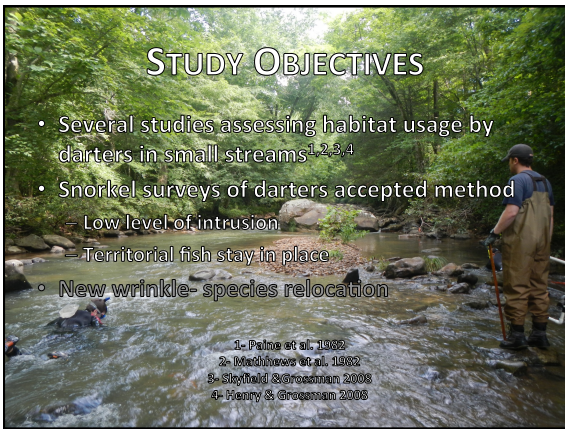

STUDY OBJECTIVES

- Several studies assessing habitat usage by darters in small streams^{1,2,3,4}
- Snorkel surveys of darters accepted method
 - Low level of intrusion
 - Territorial fish stay in place
- New wrinkle- species relocation

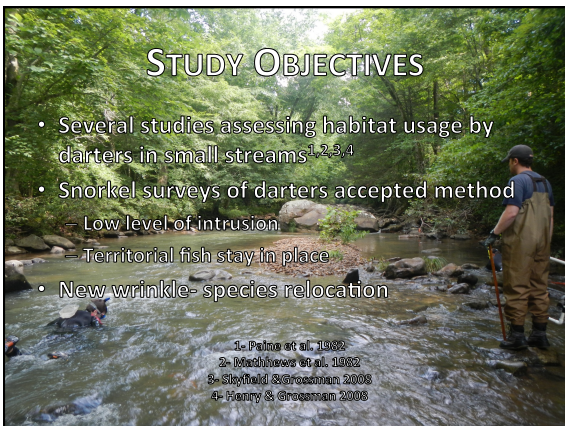

1- Paine et al. 1992
2- Matthews et al. 1992
3- Skifford & Greenman 2008
4- Henry & Greenman 2008

STUDY OBJECTIVES

- Several studies assessing habitat usage by darters in small streams^{1,2,3,4}
- Snorkel surveys of darters accepted method
 - Low level of intrusion
 - Territorial fish stay in place
- New wrinkle- species relocation

1- Paine et al. 1992
2- Matthews et al. 1992
3- Skifford & Greenman 2008
4- Henry & Greenman 2008

STUDY OBJECTIVES

- Snorkel surveys of darters accepted method
 - Low level of intrusion
 - Territorial fish stay in place
- New wrinkle- species relocation

1- Paine et al. 1992
2- Matthews et al. 1992
3- Skifford & Greenman 2008
4- Henry & Greenman 2008

STUDY OBJECTIVES

1. Determine if darter habitat usage is nonrandom
2. Determine darter habitat selection
3. Compare habitat partitioning among species
4. Assess impacts of stream restoration on habitat usage and substrate profile

STUDY OBJECTIVES

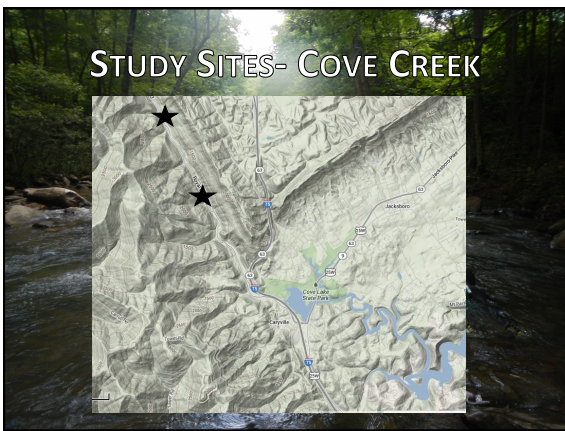

1. Determine if darter habitat usage is nonrandom
2. Determine darter habitat selection

3. Compare habitat partitioning among species
4. Assess impacts of stream restoration on habitat usage and substrate profile

ANALYSES

- Available data
 - Species observed per site ($n_{total} = 331$)

Snubnose darter, *E. tennesse*

ANALYSES

- Available data
 - Species observed per site ($n_{total} = 331$)

Redline darter, *N. ruffilineatum*

ANALYSES

- Available data
 - Habitat usage by darters
 - Available habitat per site
 - Natural, Disturbed, Restored

ANALYSES

- ANOVA
 - PROC GLIMMIX, SAS 9.3
 - $\alpha = 0.05$
- Correspondence Analysis
 - PROC CORRESP, SAS 9.3
- Chi-squared tests for association
 - PROC FREQ, SAS 9.3
 - $\alpha = 0.05$

ANALYSES

- ANOVA
