Test #1 is in 2 weeks (Tuesday, 5 October). The test will be composed of questions on topics discussed in lecture (90%), lab (5%), and assigned readings (5%). The test will cover all material through Thursday, 30 September. Lecture topics will include:

What is habitat?  
GPS and GIS (Jones)  
Populations and Landscapes  
Introduction to Habitat Analysis  
Sampling Designs  
General Sampling Techniques  
Mark-Recapture Methods  
Nantahala and Ruffed-grouse Management (Jones)  
Plant, Invertebrate, and Herpetofaunal Sampling  
Bird, Mammal, and Weather Sampling

To help you prepare for your test, you will be required to electronically submit ≥10 questions (at least 1 question per lecture, excluding the last 2 lectures next week) to me (mattjgray@utk.edu) before lecture next **Tuesday, 28 September**. I will compile these questions and post them to the class website. Approximately 50–75% of the questions on Test #1 will come directly (except for minor edits) from these questions.
